Subject: Preliminary Site Assessment
Parcel #078 – John C. Holbrook Jr. (Stanly Salvage)
42917 NC 24-27
Albemarle, North Carolina
F&R Project #66V-0092

Dear Mr. Box:

Froehling and Robertson, Inc. (F&R) has completed the authorized Preliminary Site Assessment at the John C. Holbrook Jr. property located in Albemarle, North Carolina. The work was performed in general accordance with F&R's Proposal No. 1866-00132, dated June 14, 2017 (and revised June 22, 2017). Notice to Proceed was issued to F&R on July 6, 2017. This report documents our field activities, presents the results of laboratory analysis and provides estimated quantities of petroleum impacted soils.

Please do not hesitate to contact us if you should have any questions regarding this report.

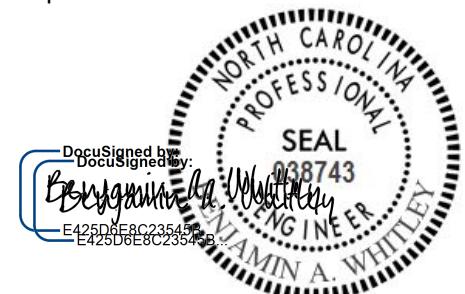

Sincerely,

FROEHLING & ROBERTSON, INC.

Preliminary Site Assessment Report
John C. Holbrook Jr. Property (Parcel #078)
Albemarle, Stanly County, North Carolina
F&R Project No. 66V-0092

1.0 Introduction

Froehling and Robertson, Inc. (F&R) has prepared this Preliminary Site Assessment (PSA) Report to document soil assessment activities performed at the John C. Holbrook Jr. Property addressed as 42917 NC 24-27, in Albemarle, Stanly County, North Carolina. The site is located approximately 1,500 feet east of the NC 24-27 and Sweet Home Church Road intersection as shown in Appendix I, Figures 1 and 2. As indicated in the Request for Technical and Cost Proposal (RFTCP), the parcel is the first of two parcels that are the location of an existing junk yard and repair shop (City Salvage 1 Inc.). According to the NCDEQ Underground Storage Tank (UST) Section Registry, no USTs are registered for the site.

According to the NCDOT within their RFTCP, acquisition of right-of-way is necessary for the proposed NC 24-27 design. As such, the NCDOT requested a PSA be performed to assess the possibility of encountering petroleum impacted soil from known or unknown USTs, and to locate USTs which may exist within proposed easements and right-of-way at the project site.

The PSA was performed in general accordance with F&R's Proposal No. 1866-00132, dated June 14, 2017 (and revised June 22, 2017) with Notice to Proceed issued to F&R by the NCDOT on July 6, 2017. The purpose of this report is to document field activities, present the results of laboratory analysis, and provide estimated quantities of petroleum impacted soils.

The site predominantly consists of wooded land. Used automobiles and scrap auto parts are located along the eastern boundary of the site. The site is bordered to the north and east by City Salvage 1 Inc.; to the south by NC 24-27; and to the west by wooded land. Access to the site is gained from NC 24-27 to the south.

2.0 Geophysical Survey

Prior to F&R's soil assessment activities, Pyramid Environmental & Engineering, P.C. (Pyramid) conducted a geophysical survey to locate suspect metal underground storage tanks (USTs). The geophysical work was conducted on July 25, 2017, and was performed within the proposed right-of-way and propose drainage and utility easements of NC 24-27.

The geophysical investigation consisted of electromagnetic (EM) induction surveys using a Geonics EM61 instrument. The EM61 data was collected along parallel survey lines spaced approximately 5 feet apart. Ground-penetrating radar (GPR) investigations were not performed at the project site. The data was reviewed in the field to evaluate the possible presence of USTs and later transferred to a desktop computer for further review. Data was collected over most of the planned survey site with the exception of areas covered with dense vegetation. Isolated EM anomalies were identified on the site, including utilities and metal debris.

Based on the EM data collected at the site, Pyramid did not observe anomalies that were interpreted to be the results of metallic USTs within about 8 feet of the ground surface. The complete geophysical report is attached as Appendix II.

3.0 Site Assessment Activities

F&R visited the site on August 15 and 16, 2017 to perform the Preliminary Site Assessment. The assessment consisted of advancing 4 direct-push (GeoProbe) borings into the soils at the project site (B-1, B-2, B-4, and B-5) and three hand auger borings (B-3, HA-1, and HA-2). The boring locations were determined by F&R staff based on the results of the geophysical survey, site features and proposed construction activities. Four of the borings (B-1 through B-4) were advanced on the southern portion of the site adjacent to NC 24-27. Borings B-5, HA-1, and HA-2 were advanced on the northern portion of the site in the wooded area. F&R attempted to advance the borings to the proposed depth of 10 feet below ground surface (bgs). However, Borings B-1, B-2, B-4, and B-5 were terminated at depths ranging from 5 to 9 feet bgs, where GeoProbe refusal was encountered. In addition, Borings B-3, HA-1 and HA-2 were terminated at 2 feet bgs where hand auger refusal was encountered. Photos detailing existing site features are attached as Appendix III and boring locations are depicted in Figure 3 of this report.

Soil sample cores from the borings were collected in disposable, 4-foot long acetate sleeves. The soil samples were visually/manually classified and screened in the field using a calibrated photo-ionization detector (PID) for evidence of petroleum hydrocarbons. Evaluation of VOC concentrations were performed using a calibrated MiniRae 3000 PID which produces results in parts per million (ppm). A representative soil sample was collected from two foot sections of each sleeve and placed in a re-sealable plastic bag. The vapors were then allowed to equilibrate in the headspace of the bag for approximately ten minutes prior to measurement with the PID. The measurements were collected by placing the probe tip into the headspace of the bag. PID

measurements can be found in the GeoProbe Logs in Appendix IV, as well as in Table 1 in Section 5.0 below.

Generally, the soil sample in each boring which exhibited the highest PID concentration was submitted for laboratory analysis for diesel range organics (DRO), gasoline range organics (GRO), Total BTEX (benzene, toluene, ethylbenzene and xylenes), 16 PAHs (polycyclic aromatic hydrocarbons) and BaP (Benzo(a)pyrene) by Ultraviolet Fluorescence (UVF) technology (RedLab QED Hydrocarbon Analyzer).

The samples were collected in laboratory-supplied sample containers, placed in a cooler with ice, and shipped via UPS to RedLab in Wilmington, North Carolina following standard chain-of custody procedures.

Due to concerns associated with the historical use of the site as an auto salvage facility, F&R collected soil samples for laboratory analysis of RCRA 8 Metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver) and Volatile Organic Compounds (VOCs). These soil samples were collected from the 0 to 2 feet bgs sample from each boring. The samples were collected in laboratory-supplied sample containers, placed in a cooler with ice, and transferred to ENCO Laboratories in Cary, North Carolina following standard chain-of custody procedures.

4.0 Subsurface Conditions

As indicated in the attached GeoProbe Logs (Appendix IV), subsurface conditions from existing ground surface to boring termination primarily included various layers of dry-moist red-orange-brown-tan silty sandy clay; and dry tan silt with stone. F&R attempted to advance the borings to the proposed depth of 10 feet below ground surface (bgs). However, Borings B-1, B-2, B-4, and B-5 were terminated at depths ranging from 5 to 9 feet bgs, where GeoProbe refusal was encountered due to dense silt and clay with stone. In addition, B-3, HA-1, and HA-2 were terminated at 2 feet bgs where hand auger refusal was encountered in dense clay.

PID readings generally did not exceed 5.5 ppm, and petroleum odors and/or groundwater were not observed during field screening or sample collection activities.

5.0 Analytical Results

As shown in the following table, petroleum hydrocarbons identified as GRO were detected in boring location B-3 at a depth from 0 to 2 feet bgs. The laboratory results indicate that the GRO concentration was detected at a concentration of 9.9 mg/kg, which is below the NCDEQ UST Section GRO Action Level of 50 mg/kg.

Petroleum hydrocarbons identified as DRO were detected in the soil samples at six boring locations advanced at the site (B-1, B-3 through B-5, HA-1, and HA-2), at depths from 0 to 2 feet bgs (B-3, HA-1, and HA-2) to 6 to 8 feet bgs (B-2). The laboratory results indicate that the DRO concentrations ranged from 1 mg/kg (B-5) to 67.8 mg/kg (B-1), which are below the NCDEQ UST Section DRO Action Level of 100 mg/kg.

The laboratory analytical results indicate concentrations of the sum of 16 EPA PAHs above the method detection limit, but below the total NCDEQ Action Level of 9,068.816 mg/kg at Boring B-1. The soil analytical results are summarized in Table 1 below. The laboratory analytical results can also be found in the attached Appendix V of this report.

Table 1
Soil Sampling Analytical Results (UVF)

Sample ID	Sample Date	Sample Depth (ft bgs)	PID Reading (ppm)	GRO (mg/kg)	DRO (mg/kg)	TPH (mg/kg)	Total BTEX (mg/kg)	Total Aromatics (mg/kg)	16 EPA PAHs (mg/kg)	BaP (mg/kg)
B-1	8/15/17	0-2	4.2	<3.3	67.8	67.8	<3.3	67.3	3.5	<0.21
B-2		6-8	5.5	<0.93	<0.93	<0.93	<0.93	<0.19	<0.3	<0.037
B-3		0-2	1.8	9.9	23.9	33.8	<3.4	14.6	<1.1	<0.13

NCDEQ Action Level			50	100	NSE	13.8056	NSE	9,068.816	0.088	

Concentrations shown in bold exceed the NCDEQ Action Level as outlined in the NCDEQ, DWM, UST Section Guidelines

ppm = parts per million

GRO = Gasoline Range Organics

DRO = Diesel Range Organics

TPH = Total Petroleum Hydrocarbons

BTEX = Benzene, Toluene, Ethylbenzene and Xylenes

NSE = No Standard Exists

As shown in Table 2, laboratory analysis detected several RCRA 8 Metals (arsenic, barium, cadmium, chromium, lead, mercury, and silver) at concentrations above laboratory method detection limit. The laboratory results indicate that the arsenic concentrations ranged from 4.24 mg/kg (B-5) to 14.9 mg/kg (B-3), which are above the NCDEQ Inactive Hazardous Sites Branch (IHSB) Residential Preliminary Soil Remediation Goal (PSRG) level of 0.68 mg/kg. The remaining metals were below their respective NCDEQ IHSB Residential PSRG.

Table 2
Soil Sampling Analytical Results (Metals)

Sample ID	Sample Date	Sample Depth (ft bgs)	Arsenic (mg/kg)	Barium (mg/kg)	Cadmium (mg/kg)	Chromium (mg/kg)	Lead (mg/kg)	Mercury (mg/kg)	Silver (mg/kg)
B-1	8/15/17	0-2	8.42	42.7	0.146	43.8	66.0	0.0465	ND
B-2		0-2	7.47	33.3	0.0950	20.4	34.0	0.0239	ND
B-3		0-2	14.9	31.1	0.382	67.4	163	0.0251 J	ND
B-4		0-2	6.52	43.1	0.195	146	42.6	0.0250 J	3.17
B-5	8/16/17	0-2	4.24	34.9	0.284	66.8	21.3	0.0217 J	1.07

HA-2		0-2	6.70	47.1	0.0625	23.4	26.3	0.139	ND
NCDEQ IHSB Residential PSRG			0.68	3,100	14.0	23,000	400*	2.3	78
NCDEQ IHSB Industrial PSRG			3.0	47,000	200	100,000	800*	3.1	1200

Concentrations shown in bold exceed the NCDEQ IHSB Residential PSRG as outlined in the NCDEQ Inactive Hazardous Sites Section Guidelines

Residential and Industrial PSRGs are not available for Lead. Therefore, Lead concentrations are compared to Residential and Industrial EPA Regional Screening Levels (RSLs)

J = The reported value is between the laboratory method detection limit (MDL) and the laboratory method reporting limit (MRL), adjusted for actual sample preparation data and moisture content, where applicable

In addition, 2-butanone, 2-chlorotoluene, 4-isopropyltoluene, acetone, styrene, and toluene were detected above laboratory MDL in the soil samples submitted for analysis. F&R notes that there are no PSRG levels for 4-isopropyltoluene. The concentrations of the remaining VOCs were below their respective NCDEQ IHSB Residential PSRG levels. The soil analytical results for VOCs are summarized in Table 3 below.

Table 3
Soil Sampling Analytical Results (VOCs)

Sample ID	Sample Date	Sample Depth (ft bgs)	2-Butanone (mg/kg)	2-Chlorotoluene	4-Isopropyltoluene	Acetone	Styrene	Toluene
B-3	8/15/17	0-2	0.0028 J	ND	ND	0.48	ND	ND
B-5	8/16/17	0-2	0.0023 J	ND	ND	0.067	ND	ND
HA-1	8/16/17	0-2	0.011	ND	0.080	0.69 E	0.11	0.00059 J
HA-2	8/16/17	0-2	0.0067	0.0014 J	0.016	0.35	0.0074	ND
NCDEQ IHSB Residential PSRG			5,500	250	NSE	12,000	870	820
NCDEQ IHSB Industrial PSRG			28,000	250	NSE	100,000	870	820

E = The concentration indicated for this analyte is an estimated value above the calibration range of the instrument.
This value is considered an estimate.

6.0 Conclusions and Recommendations

F&R conducted a PSA at the John C. Holbrook Jr. Property addressed as 42917 NC 24-27, in Albemarle, Stanly County, North Carolina. A geophysical investigation was performed by Pyramid Environmental & Engineering to investigate the presence and location of USTs in the proposed easements and right-of-way. Based on the results of the geophysical survey, it was determined that USTs were not present within the within the surveyed area.

Four GeoProbe and three hand auger borings were advanced during the assessment within the proposed easements and right-of-way, where grading activities and storm drain utilities are proposed in association with the NC 24-27 improvements. Based on the results of laboratory testing and observed PID readings, petroleum impacted soils were detected in the vicinity of boring locations B-1, B-3 through B-5, HA-1, and HA-2. Laboratory analysis detected concentrations of DRO at these locations, and GRO at boring location B-3; however, the concentrations of these compounds were below the NCDEQ Action Level of 100 mg/kg DRO and 50 mg/kg GRO.

Several metals were detected above laboratory MDL in the soil samples submitted for laboratory analysis of RCRA-8 Metals, including arsenic, barium, cadmium, chromium, lead, and mercury. Arsenic was detected at a concentration ranging from 4.24 to 14.9 mg/kg, and was the only metal analyzed during this investigation that exceeded its IHSB Residential PSRG (0.68 mg/kg). According to the USGS Publication *Geochemical and Mineralogical Data for Soils of the Conterminous United States: U.S. Geological Survey Data Series 801* (Smith, D.B., Cannon, W.F., Woodruff, L.G., Solano, Federico, Kilburn, J.E., and Fey, D.L., 2013), arsenic may be naturally occurring in the Stanly County region, at a concentration ranging from 1.2 to 14.2 mg/kg. Therefore, the detection of Arsenic is not considered a concern with respect to the project site or proposed construction activities.

Several VOCs including 2-butanone, 2-chlorotoluene, 4-isopropyltoluene, acetone, styrene, and toluene were detected above laboratory MDL in the soil samples submitted for analysis. F&R notes that there are no PSRG levels for 4-Isopropyltoluene. The concentrations of the remaining VOCs were below their respective NCDEQ IHSB Residential PSRG levels.

It should be noted that a delineation of the soil contamination was not performed, as this was not included in the proposed scope of work. The above estimates are based on interpretations of soil analytical results, PID readings and our experience with petroleum UST releases.

7.0 Limitations

These services have been performed, under authorization of the North Carolina Department of Transportation for specific application on this project. These services have been performed in accordance with generally accepted environmental and hydrogeological practices. No other warranty, expressed or implied is made. As with any subsurface investigation, actual conditions exist only at the precise locations from which samples were taken. Certain inferences are based on the results of sampling and related testing to form a professional opinion of conditions in areas beyond those from which samples were taken. Our conclusions and recommendations are based upon information provided to us by others, our sampling and testing results and our site observations. We have not verified the completeness or accuracy of the information provided by others, unless otherwise noted. Our observations are based upon conditions readily visible at the site at the time of our site visits.

Froehling & Robertson, Inc. by virtue of providing the services described in this report, does not assume the responsibility of the person(s) in charge of the site, or otherwise undertake responsibility for reporting to any local, state or federal public agencies any conditions at the site that may present a potential danger to public health, safety or the environment. In areas that require notification of local, state, or federal public agencies as required by law, it is the Client's responsibility to so notify.

EXECUTIVE SUMMARY

Project Description: Pyramid Environmental conducted a geophysical investigation for Froehling & Robertson, Inc. (F&R) at Parcel 078, located at 42917 NC 24/27, Albemarle, NC. The survey was part of a North Carolina Department of Transportation (NCDOT) Right-of-Way (ROW) investigation (NCDOT Project R-2530B). F&R directed Pyramid as to the geophysical survey boundaries at the project site, which were designed to extend from the existing edge of pavement to the proposed ROW lines and/or easement lines within the property, whichever distance was greater. Conducted on July 25, 2017, the geophysical investigation was performed to determine if unknown, metallic underground storage tanks (USTs) were present beneath the survey area.

Geophysical Results: The geophysical investigation consisted of an electromagnetic (EM) induction-metal detection survey. A total of two EM anomalies were identified. Both of the EM anomalies were directly attributed to visible cultural features at the ground surface. For this reason, a GPR survey was not required. Collectively, the geophysical data did not show any evidence of unknown metallic USTs at Parcel 078. A portion of the property within the proposed NCDOT easements was inaccessible due to dense vegetation.

INTRODUCTION

Pyramid Environmental conducted a geophysical investigation for Froehling and Robertson, Inc. (F&R) at Parcel 078, located at 42917 NC 24/27, Albemarle, NC. The survey was part of a North Carolina Department of Transportation (NCDOT) Right-of-Way (ROW) investigation (NCDOT Project R-2530B). F&R directed Pyramid as to the geophysical survey boundaries at the project site, which were designed to extend from the existing edge of pavement to the proposed ROW lines and/or easement lines within the property, whichever distance was greater. Conducted on July 25, 2017, the geophysical investigation was performed to determine if unknown, metallic underground storage tanks (USTs) were present beneath the survey area.

The site consisted of open grass areas adjacent to a zone of dense vegetation, resulting in a portion of the property being inaccessible to the geophysical equipment. An aerial photograph showing the survey area boundaries and ground-level photographs are shown in **Figure 1**.

FIELD METHODOLOGY

The geophysical investigation consisted of an electromagnetic (EM) induction-metal detection survey. Pyramid collected the EM data using a Geonics EM61 metal detector integrated with a Trimble AG-114 GPS antenna. The integrated GPS system allows the location of the instrument to be recorded in real-time during data collection, resulting in an EM data set that is geo-referenced and can be overlain on aerial photographs and CADD drawings. A boundary grid was established around the perimeter of the site with marks every 10 feet to maintain orientation of the instrument throughout the survey and assure complete coverage of the area.

According to the instrument specifications, the EM61 can detect a metal drum down to a maximum depth of approximately 8 feet. Smaller objects (1-foot or less in size) can be detected to a maximum depth of 4 to 5 feet. The EM61 data were digitally collected at

approximately 0.8-foot intervals along north-south trending or east-west trending, generally parallel survey lines, spaced five feet apart. The data were downloaded to a computer and reviewed in the field and office using the Geonics NAV61 and Surfer for Windows Version 14.0 software programs.

GPR data were not collected due to all EM anomalies being directly attributed to visible cultural features at the ground surface (see *Discussion of Results* section below).

Pyramid's classifications of USTs for the purposes of this report are based directly on the geophysical UST ratings provided by the NCDOT. These ratings are as follows:

Geophysical Surveys for Underground Storage Tanks on NCDOT Projects

High Confidence	Intermediate Confidence	Low Confidence	No Confidence
Known UST Active tank - spatial location, orientation, and approximate depth determined by geophysics.	Probable UST Sufficient geophysical data from both magnetic and radar surveys that is characteristic of a tank. Interpretation may be supported by physical evidence such as fill vent pipe, metal cover plate, asphalt/concrete patch, etc.	Possible UST Sufficient geophysical data from either magnetic or radar surveys that is characteristic of a tank. Additional data is not sufficient enough to confirm or deny the presence of a UST.	Anomaly noted but not characteristic of a UST. Should be noted in the text and may be called out in the figures at the geophysicist's discretion.

DISCUSSION OF RESULTS

Discussion of EM Results

A contour plot of the EM61 results obtained across the survey area at the property is presented in **Figure 2**. Each EM anomaly is numbered for reference in the figure. The following table presents the list of EM anomalies and the cause of the metallic response, if known:

LIST OF METALLIC ANOMALIES IDENTIFIED BY EM SURVEY

Metallic Anomaly #	Cause of Anomaly	Investigated with GPR
1	Utilities	
2	Metal debris	

All of the EM anomalies were directly attributed to visible cultural features including utilities and metallic debris. For this reason, a GPR survey was not required.

Collectively, the geophysical data did not show any evidence of unknown metallic USTs at Parcel 078.

Figure 3 provides an overlay of the geophysical survey area onto the NCDOT MicroStation engineering plans (proposed ROW and easements) for reference.

SUMMARY & CONCLUSIONS

Pyramid's evaluation of the EM61 data collected at Parcel 078 in Albemarle, North Carolina, provides the following summary and conclusions:

- The EM61 survey provided reliable results for the detection of metallic USTs within the accessible portions of the geophysical survey area.
- All of the EM anomalies were directly attributed to visible cultural features at the ground surface. For this reason, a GPR survey was not required.
- Collectively, the geophysical data did not show any evidence of unknown metallic USTs at Parcel 078. A portion of the property within the proposed NCDOT easements was inaccessible due to dense vegetation.

LIMITATIONS

Geophysical surveys have been performed and this report was prepared for F&R in accordance with generally accepted guidelines for EM61 surveys. It is generally recognized that the results of the EM61 surveys are non-unique and may not represent actual subsurface conditions. The EM61 results obtained for this project have not conclusively determined the definitive presence or absence of metallic USTs, but the evidence collected is sufficient to result in the conclusions made in this report. Additionally, it should be understood that areas containing extensive vegetation, reinforced concrete, or other restrictions to the accessibility of the geophysical instruments could not be fully investigated.

The contour plot shows the differential results of the EM61 instrument in millivolts (mV). The differential results focus on larger metallic objects such as USTs and drums. The EM61 data were collected on July 25, 2017, using a Geonics EM61 instrument. Verification GPR data were not required due to all EM anomalies being directly attributed to visible cultural features.

Project Number: 66V-0092, Project Name/Desc: NCDOT PSAs

ENCO Workorder(s): CA11841

Dear Ben Whitley,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Thursday, August 17, 2017.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Cary. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

A handwritten signature in black ink that reads "Chuck Smith". The signature is fluid and cursive, with "Chuck" on the first line and "Smith" on the second line.

Chuck Smith

PROJECT NARRATIVE

Client: Froehling and Robertson (FR004)
Project: NCDOT PSAs
Lab ID: CA11841

Overview

Environmental Conservation Laboratories, Inc. (ENCO) analyzed all submitted samples in accordance with the methods referenced in the laboratory report. Any particular difficulties encountered during sample handling by ENCO are discussed in the QC Remarks section below.

Quality Control Samples

The spike recovery was outside acceptance limits for the MS and/or MSD (QM-07). The batch was accepted based on an acceptable LCS recovery.

The post-digestion spike did not meet method requirements due to confirmed matrix effects (QM-08).

Precision between duplicate matrix spikes of the same sample was outside acceptance limits (QM-11).

The RPD value for the sample duplicate or MS/MSD was outside acceptance limits (QR-05).

Quality Control Remarks

The surrogate recovery was outside acceptance limits (QS-03).

Sample PO78-HA1 has two method 8260 analyses reported due to sample inhomogeneity (QM-15). The sample was originally analyzed at 1X but due to an Acetone concentration that exceeded the calibration range it was analyzed at a 133X dilution. Due to the non-homogenous nature of soil, Acetone was not detected in the dilution. Both analyses are reported.

The 8260 analyses of samples PO53-B1 and B2 were conducted outside the method holding time (Q-01).

Other Comments

The analytical data presented in this report are consistent with the methods as referenced in the analytical report. Any exceptions or deviations are noted in the QC remarks section of this narrative or in the Flags/Notes and Definitions section of the report.

ANALYTICAL RESULTS
Description: PO79-B7

Lab Sample ID: CA11841-06

Received: 08/17/17 11:00

Matrix: Soil

Sampled: 08/15/17 16:10

Work Order: CA11841

Project: NCDOT PSAs

Sampled By: Client

% Solids: 83.53

ANALYTICAL RESULTS
Description: PO79-B1

Lab Sample ID: CA11841-13

Received: 08/17/17 11:00

Matrix: Soil

Sampled: 08/16/17 09:45

Work Order: CA11841

Project: NCDOT PSAs

Sampled By: Client

% Solids: 85.87

ANALYTICAL RESULTS
Description: PO53-B3

Lab Sample ID: CA11841-20

Received: 08/17/17 11:00

Matrix: Soil

Sampled: 08/14/17 16:00

Work Order: CA11841

Project: NCDOT PSAs

Sampled By: Brian Olim

% Solids: 95.80

FLAGS/NOTES AND DEFINITIONS

- B** The analyte was detected in the associated method blank.
- D** The sample was analyzed at dilution.
- J** The reported value is between the laboratory method detection limit (MDL) and the laboratory method reporting limit (MRL), adjusted for actual sample preparation data and moisture content, where applicable.
- U** The analyte was analyzed for but not detected to the level shown, adjusted for actual sample preparation data and moisture content, where applicable.
- E** The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
- MRL** Method Reporting Limit. The MRL is roughly equivalent to the practical quantitation limit (PQL) and is based on the low point of the calibration curve, when applicable, sample preparation factor, dilution factor, and, in the case of soil samples, moisture content.
- PQL** PQL: Practical Quantitation Limit.
- N** The analysis indicates the presence of an analyte for which there is presumptive evidence (85% or greater confidence) to make a "tentative identification".
- P** Greater than 25% concentration difference was observed between the primary and secondary GC column. The lower concentration is reported.
- Q-01** Analysis performed outside of method - specified holding time.
- QM-07** The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
- QM-08** Post-digestion spike did not meet method requirements due to confirmed matrix effects (dilution test).
- QM-11** Precision between duplicate matrix spikes of the same sample was outside acceptance limits.
- QM-15** Confirmed sample inhomogeneity
- QR-05** The RPD value for the sample duplicate or MS/MSD was outside of QC acceptance limits.
- QS-03** Surrogate recovery outside acceptance limits
